Lab Practical #09:

Practical Assignment #09:

1.1 Story-1: Select Ride In System

Story # S1	:	As a User, I want to select a ride in the system
Priority	:	High
Estimate	:	M
Reason	:	Select Ride is the mandatory first step before confirm ride.

1.1.1 Scenario# S1.1

Scenario# S1.1	:	Select Ride with Valid Information
Prerequisite	:	User is logged in to Vehicle Booking System.
Acceptance Criteria	:	Given: The User is navigated to the select ride page. Valid details including your location, destination, ride type are available. When: The receptionist selects the ride. The receptionist enters valid ride details into all form fields. The receptionist clicks the "Book" button to go to the next page. Then: The system successfully load payment page.

1.1.2 Scenario# S1.2

Scenario# S1.2	:	Select Ride with Missing Mandatory Fields
Prerequisite	:	User is logged in to Vehicle Booking System.
Acceptance Criteria	:	Given: The receptionist is on the select ride page. When: The receptionist leaves the mandatory "Your Location" field blank. The receptionist clicks the "Book" button. Then: The system blocks the selection request. The user receives an error message stating " Your Location is required," and the unsaved data remains in the form.

1.1.3 Scenario# S1.3

Scenario# S1.3	:	Select Ride with an Invalid Your Location and destination Value
Prerequisite	:	User is logged in to Vehicle Booking System.
Acceptance Criteria	:	Given: The User is on the select ride page.

Date: 21/08/2026

	When: The User inputs number (like "-5") into the Your field. The User clicks the "Save" button. Then: The system blocks the saving process, highlights the input box in red, and displays a validation error message stating "Please enter a valid Location details."
--	--

1.2 Story-2: Confirm Ride with Payment

Story # S2	:	Confirm Ride with Payment
Priority	:	High
Estimate	:	M
Reason	:	Payment and confirmation secure the vehicle booking after selecting a ride.

1.2.1 Scenario# S2.1

Scenario# S1.1	:	Successful Payment and Ride Confirmation
Prerequisite	:	User is logged in, has completed Scenario S1.1, and is on the payment page.
Acceptance Criteria	:	Given: The payment page is successfully loaded with correct ride details and the final fare. When: The user enters valid payment details (e.g., credit card or wallet info) and clicks the "Confirm & Pay" button. Then: The system processes the payment, displays a success message stating "Booking Confirmed! Your ride is on the way," and sends a receipt to the user's registered email.

1.2.2 Scenario# S2.2

Scenario# S1.2	:	Payment Failure due to Insufficient Funds
Prerequisite	:	User is logged in and is on the payment page.
Acceptance Criteria	:	Given: The user is on the payment page with a total fare visible. When: The user uses a payment method with insufficient funds and clicks "Confirm & Pay." Then: The system declines the transaction, blocks the booking confirmation, and displays an error message stating "Transaction Failed: Insufficient funds. Please try another payment method."

1.2.3 Scenario# S2.3

Scenario# S1.3	:	Session Timeout on Payment Page
Prerequisite	:	User is logged in and is on the payment page.
Acceptance Criteria	:	Given: The user is on the payment page. When: The user remains inactive on the page for more than 10 minutes.

Date: 21/08/2026

	Then: The system automatically cancels the pending ride hold, logs out the user for security, and redirects them to the login page with a message stating "Session expired due to inactivity."
--	---

1.3 Story-3: Track Ride Status

Story # S3	: Track Ride Status
Priority	: High
Estimate	: M
Reason	: Real-time tracking allows the user to see the vehicle's location and estimated arrival time after a successful booking.

1.3.1 Scenario# S3.1

Scenario# S3.1	: Live Tracking with Active GPS
Prerequisite	: User is logged in, and a ride booking has been successfully confirmed (Scenario S2.1).
Acceptance Criteria	Given: The user is navigated to the live tracking page. When: The driver's GPS signal is active and moving. Then: The system displays the real-time location of the vehicle on the map, shows the driver's details, and updates the Estimated Time of Arrival (ETA) every 10 seconds.

1.3.2 Scenario# S3.2

Scenario# S3.2	: Lost GPS Connection Signal
Prerequisite	: User is on the live tracking page.
Acceptance Criteria	Given: The user is tracking an active ride. When: The driver's device loses GPS connection or network signal. Then: The system pauses the vehicle icon at its last known location on the map and displays a warning status banner stating "Connection lost. Reconnecting to driver...".

1.3.3 Scenario# S3.3

Scenario# S3.3	: Ride Cancellation by Driver
Prerequisite	: User is on the live tracking page waiting for the vehicle to arrive.
Acceptance Criteria	Given: The user is tracking the assigned vehicle. When: The driver cancels the ride assignment before reaching the pick-up location.

DARSHAN INSTITUTE OF ENGINEERING & TECHNOLOGY

Semester 3rd | Practical Assignment | Software Engineering (2304CS304)

Date: 21/08/2026

Then: The system stops the tracking screen, displays an alert stating "Your driver had to cancel. We are re-assigning a new ride for you," and automatically searches for the next available vehicle.
